# JAC Computer Services

## Remote Data Backups

We provides secure, online, remote data backup solutions for individuals, businesses, home offices and students. Our automatic remote data backups can be performed 24 hours a day, 365 days a year and each data backup is compressed and encrypted on your PC and then stored offsite on secure remote backup servers.

Your data and computer files are an integral part of your life and business. They are the link between you, your work and your clients. Data loss could mean disaster. JAC Computer Services provides the ability to secure and quickly recover critical data thus providing the same data management benefits available to the largest corporations. It can automatically back up your computer system every day via an Internet connection using our easy to install and configure client program. Your data is secured with Military grade (AES - 256bit) encryption for safe transmission and storage off-site.

No extra hardware, no tapes, and no hassles. Human error is virtually eliminated. With JAC Computer Services, there are no more excuses as to why your data was not backed up. Even if you backup your data now to disk or tape, you may not remember to do it every day and you may not take it offsite. This makes your important data vulnerable to fire, flood, and theft!

## Remote Spyware & Virus Cleaning

You may have learned by now that even the best virus and spyware cleaners on the market don't always catch or remove every type of infection that can get onto your computer. So if **your computer has been acting strangely or displaying unusual pop-ups, that's when you need to call our technician.**

Our technicians are specially trained in tracking down and eradicating all types of computer viruses and spyware. You can easily and securely connect to one of our friendly and knowledgeable online technicians and sit back and watch as they seek and destroy any harmful viruses and spyware you may have.

**Don't take chances!** Computer viruses can cause serious harm to your computer or even transmit your personal information to online hackers. Stop the threat today by calling us!

## Remote Computer Repair & Support

Our remote computer repair and support services are available to any computer that is connected to the Internet, anywhere in North America; It can be from home or business, a hotel suite or while telecommuting, or even through local wireless 'hotspots'.

Our friendly online technicians are highly trained and can remotely solve your computer repair and support needs wherever you happen to be. We can even connect through your home or corporate firewall.

### Watch as we remotely serve you

Then just sit back and watch as our remote technician controls your mouse and keyboard to diagnose and fix your computer problems or to demonstrate how to use or configure common applications. **And if it turns out to be an issue that cannot be fixed remotely, we will gladly arrange for one of our technicians to come to your location and provide on-site computer repair!**

We can resolve your computer issues and get you back to using your computer instead of fighting with it.

## Remote Computer Maintenance

You have probably heard the old saying that "an ounce of prevention is worth a pound of cure". No where is that more true than when it comes to the maintenance of personal and business computers.

**Just like an automobile, your computer requires regular maintenance** in order for it to keep running smoothly. Ignoring that maintenance over time will result in slower performance, program freezes and even complete system crashes which often mean expensive and time consuming repairs.

Help keep your computer systems running smoothly by calling on an Online Technician to routinely "tune up" your computer systems. Because you never know whether your next computer crash is just around the corner.

## Internet and Email Troubleshooting

Can't seem to get online, to surf the net, or do you get errors while trying to check your email. Are you frustrated with calling your internet provider for support and they tell you that every thing is working on their end therefore they cannot help you.

We can resolve your issues with a simple phone call, most problems that arise can be fixed in about 15 minutes.

## Crashed hard Drive? We can Help!

Our data recovery service restores critical business information from hard drives that have suffered due to:

- ⇒ Accidental Formatting
- ⇒ Accidental Deletion
- ⇒ Hard Drive Crash
- ⇒ Equipment Malfunction
- ⇒ Software Corruption
- ⇒ Computer Virus Attack
- ⇒ Natural Disasters
- ⇒ Power Surges and Outages

Using special data recovery techniques, methods, and tools we offer timely, affordable data recovery services to small businesses and home-based computer users that have lost important files.

Never assume your valuable data can't be recovered - we find that your data is recoverable the majority of the time!
